

Common Module - Detailed Sequence Diagrams

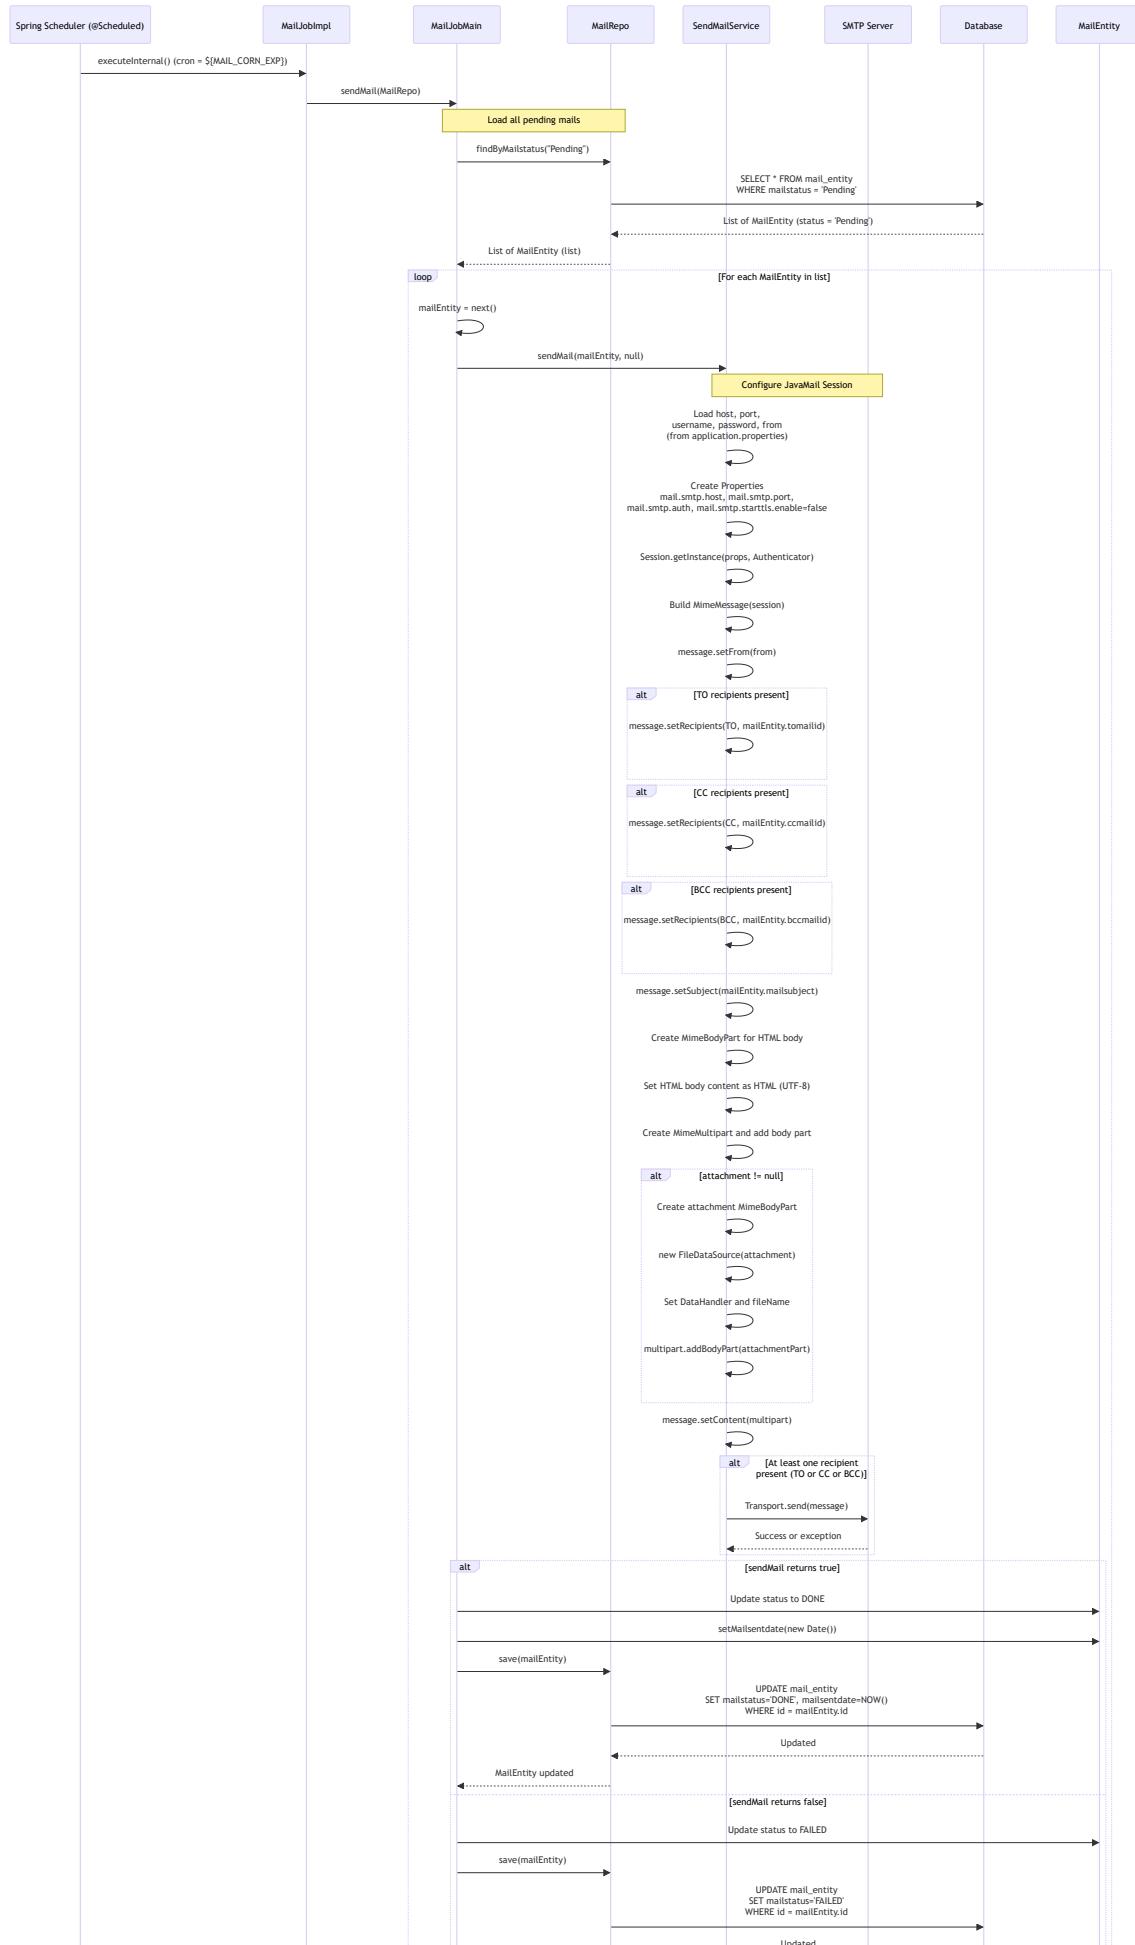

This document describes the **key technical flows** implemented in the `com.i4o.dms.kubota.common` module:

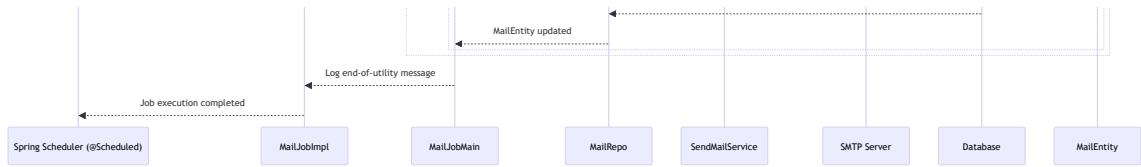

- **Mail sending pipeline** (scheduled job + mail service + mail repository).
- **System lookup API.**
- **Jasper report generation and export** (PDF/Excel/CSV/HTML).

All diagrams use Mermaid sequence diagrams and reflect the current implementation of the common module.

1. Mail Sending Pipeline (**Scheduled Job** → **MailJobMain** → **SendMailService**)

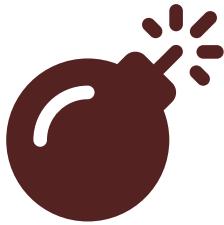

This flow shows how **pending emails** in the database are periodically sent via SMTP using `MailJobImpl`, `MailJobMain`, and `SendMailService`.

2. System Lookup API (`SysLookupController.lookupByCode`)

This flow shows how system lookup values are fetched for UI dropdowns or configuration using `SysLookupController` and underlying repository logic.
